Introduction

The *Housing Inventory* is the Planning Department's annual survey of housing production trends in San Francisco. It has reported changes in the City's housing stock, including housing construction, demolition, and alterations, since 1967. This report is 38th in the series and presents housing production activity during 2007.

By monitoring changes in San Francisco's housing stock, the *Housing Inventory* provides a basis for evaluating the housing production goals and policies of the Housing Element of the San Francisco General Plan. Housing policy implications that may arise from data in this report, however, are not discussed here.

The *Housing Inventory* reports housing production, which begins when a building permit application for a project is filed with the City. The application is first reviewed by the Planning Department for compliance with the Planning Code, zoning, and other applicable policies. If the Planning Department approves the project, the Department of Building Inspection (DBI) reviews the application for compliance with the Building Code. If DBI approves the application, it issues a permit authorizing construction. The next step is for the project sponsor to begin construction on the project. Once construction has been completed and passed all required inspections, DBI issues a Certificate of Final Completion (CFC) for the project.

The *Housing Inventory* also reports the annual net gain in housing units citywide and by planning district. Net gain is the number of newly constructed units with CFCs issued, adjusted for alterations – which can add or subtract units – and

demolitions. Affordable housing, condominiums, and changes in the residential hotel stock are other areas of interest covered by the *Housing Inventory*. In addition, the report provides a regional perspective by examining housing construction activity and home prices for the nine-county Bay Area region. Finally, major projects completed, authorized, under review, or in the pipeline are listed in Appendix A.

This report was prepared from information received from a number of different sources including the Department of Building Inspection, the Department of Public Works, and Planning Department records. The Mayor's Office of Housing, the San Francisco Housing Authority and the San Francisco Redevelopment Agency provided information on affordable housing projects. The Construction Industry Research Board provided Bay Area building permit data. The California Association of Realtors and Rent-SF.com provided housing costs. Project sponsors also contributed data.

Copies of this report can be downloaded from the Publications & Reports link at the Planning Department's web site at http://www.sfgov.org/planning

A limited number of copies are available from the Planning Department, 1650 Mission Street, Suite 400, San Francisco, CA 94103. Copies may also be reviewed at the Government Information Center on the fifth floor of the San Francisco Main Library.

Department Staff Contact for this report is Scott Dowdee, (415) 558-6259, scott.dowdee@sfgov.org

Key Findings

Housing Production

- New housing production in 2007 totaled 2,679 units. This includes 2,197 units in new construction and 482 new units added through conversions of non-residential uses or expansion of existing structures.
- Some 112 units were lost through demolition, unit mergers, or removal of illegal units.
- This year saw a net addition of 2,567 units to the City's housing stock, a 34% increase over 2006. This is also 39% higher than the 10-year average and 70% higher than the 20-year average.
- As of 2007, there are 360,399 dwelling units in San Francisco: 31% are single-family homes, 34% are in buildings with two to nine units, and 35% are in buildings with 10 or more units.
- In 2007, 3,281 units were authorized for construction. This represents a 41% increase from 2006. New housing authorized for construction over the past five years continues to be overwhelmingly (82%) in buildings with 20 or more units. In 2007, this trend is repeated with 81% of authorized units slated for 20+ unit buildings.
- The Planning Department fully entitled 74 projects proposing a total of 1,960 units in 2007.
- New condominiums recorded peaked in 2007 with 3,395 units - a 38% increase over 2006. Almost 92% of those units were in buildings with 20 units or more. Similarly, 2007 experienced the largest number of condominium conversions ever - 784 or 8% more than converted in 2006.

• New housing development in 2007 continued to be concentrated on the eastern side of the city, particularly in the South of Market planning district, where 61% of all units were built. The Western Addition planning district ranked second, where 16% of net units were added.

Affordable Housing

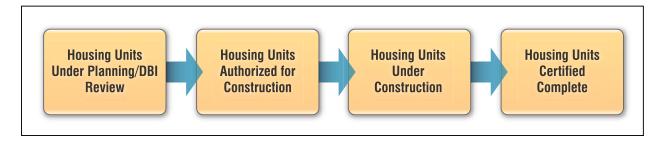

- In 2007, 735 new affordable housing units were constructed — almost 50% more than the previous year. This includes 167 inclusionary units and 51 secondary units added to existing structures.
- About 56% of the new affordable units were low-income rental units.
- The number of inclusionary affordable units (169) represents almost an 11% decrease over 2006.

Housing Production Process

The Housing Inventory describes net changes in the housing stock and details units that have been certified complete, units that were authorized for construction, and units that are under review by the Planning Department.

The housing production process begins with a project review by the Planning Department and ends with the issuance of a Certificate of Final Completion (CFC) by the Department of Building Inspection (DBI). Figure 1 outlines the main stages of the housing production process.

FIGURE 1. The Housing Production Process

Units Reviewed by Planning Department and DBI

For most major projects, review by the Planning Department is the first step in the process. Proposals are reviewed by the Planning Department for compliance with the Planning Code, the General Plan, environmental requirements, and other regulations and policies. Generally, only major projects require special Planning Department approvals, such as a conditional use permit or variance. The number and type of projects undergoing Planning Department review are indicators of current building interest and production expectation within the next two to five years. Following Planning Department approval and entitlements, the Department of Building Inspection (DBI) reviews the project for compliance with the Building Code.

Units Authorized for Construction

If DBI approves the project following its own review, it issues building permits authorizing construction. Projects with approved building permits generally start construction within 90 days from the date the permit is issued. Start of construction, however, may be delayed for up to a year. If the permit is not picked up or acted on within 90 days, the permit expires. The number of units authorized for construction is a key indicator of future housing construction.

Units Certified Complete

Projects are inspected by DBI at various stages throughout the construction process. However, inspectors only issue Certificates of Final Completions (CFCs) for projects that are deemed 100% complete. Units certified complete are an indicator of changes to the City's housing supply and include units gained or lost from new construction, alterations, and demolitions.

For the purposes of this report, however, units that have received Temporary Certificates of Occupancy (TCOs) or "Final Inspection Approval" from the Department of Building Inspection are also considered and counted as completed units.

Housing production is measured in terms of units rather than projects because the number of units in a project varies. Not all projects reviewed or approved are built. A project's building permit application may be withdrawn, disapproved, or revised; its permit may also expire if, for example, a project is not financed. Housing production is also affected by changes in market conditions and the economy. However, once building construction starts, a project is usually completed within one to two years, depending on the size of the project.

Housing Stock

The number of units in San Francisco's housing stock is derived by taking the total units from the 2000 Census and then adding the net unit changes following the April 2000 count. The net unit change is the sum of units completed from new construction and alterations minus units lost from demolition and alterations.

Since the 2000 Census, there has been a net gain of 15,701 units. In 2007, 2,567 net units were added to the housing stock. This represents a 34% increase from the 1,914 units added in 2006.

By the end of 2007, housing units in San Francisco totaled 360,485, with a near equal distribution between single family units (31%), moderate density buildings (two to nine units - 34%), and higher density structures (10 or more units - 35%). This distribution will likely change in the next few years as the trend has been moving towards increasingly larger buildings.

As of December 2007, units in buildings with 20 or more units comprised 25% of the City's total housing. Of all units added since the 2000 Census, 78% have been in buildings with more than 20 units.

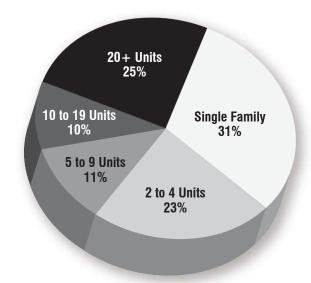

Table 1 provides a profile of San Francisco's housing stock by building type from 2000 through 2007. Figure 2 illustrates San Francisco's housing stock by building type for 2007.

TABLE 1. San Francisco Housing Stock by Building Type, 2000-2007

Building Type	Single Family	2 to 4 Units	5 to 9 Units	10 to 19 Units	20 + Units	Total
2000 Census count, April 2000	111,125	80,168	38,940	34,996	79,469	344,698
Added April 2000 to 2006	66	1,022	815	1,251	9,980	13,134
2007	51	125	42	63	2,286	2,567
Total	111,242	81,315	39,797	36,310	91,735	360,399

Sources: U.S. Census Bureau; Planning Department

FIGURE 2. San Francisco Housing Stock by Building Type, 2007

Housing Production Trends

New Housing Construction

- New construction unit totals for 2007 2,197

 were up by 31% from 2006. While less than the 20-year peak set in 2003, new construction in 2007 is 27% higher than the 10-year average of 1,730 units.
- This year also saw the highest number of units added through "alterations" since tracking of this data began in 1990: 482 units. Conversions of non-residential uses resulted in 392 new units and 90 new units were added through expansion of existing structures.
- The number of demolitions in 2007 81 is almost double that of the previous year. However, this is still 47% lower than the 10-year demolition average of 151 units.
- Thirty-one units were also lost due to mergers, removal of illegal units, or conversion of residential units to non-residential uses.
- In 2007, a net of 2,567 units were added to the housing stock, an increase of 34% over the previous year's total. This is also 39% above the 10-year average (1,846) and 70% above the 20-year average (1,510). These increases in the number of new construction units and units gained through alterations offset the corresponding increase in demolitions.
- In 2007, the Department of Building Inspection (DBI) authorized 3,281 units for construction according to building permit data. That number represents a 41% increase from 2006 (2,332).

Table 2, and Figures 3 and 4 show housing production trends over the past 20 years. The table and figures account for net new units gained – which is the number of units newly constructed and adjusted for alterations, which can add or subtract

units, and demolitions. Figure 5 illustrates housing production activity from 2003-2007.

Some of the larger projects that were completed in 2007 include: 555 4th Street (300 units); 420 Berry Street (236 affordable units); 170 King Street (198 units); 451 Kansas Street (165 units); 201 Berry Street (139 affordable units); 77 Bluxome Street (102 units); 881 Turk Street (101 affordable units); 235 Berry Street (99 units); and 1300 Fillmore Street (80 units).

A list of all market rate projects with 10 units or more completed in 2007 is included in Appendix A, List 1. Appendix A, List 2 includes all major affordable housing projects completed in 2007.

Projects Approved and Under Review by Planning

Depending on the type of project, there are various approvals by the Planning Department that a project needs to be fully entitled. Full entitlement of a project means that the project sponsor can proceed with the next step in the development process: securing approval and issuance of the building permit.

- In 2007, 175 projects with 10,281 units were filed at the Planning Department. This surpasses the count in 2006 (7,263 units) by 31% and is 42% higher than the five-year average (7,233). The number of units filed with Planning has increased steadily over the last five years.
- As of December 31, 2007, the total number of units under review at the Planning Department was 15,713.
- The Planning Department approved and fully entitled 74 projects in 2007; these projects propose a total of 1,960 units.

TABLE 2. San Francisco Housing Trends, 1988-2007

Year	Units Authorized for Construction	Units Completed from New Construction	Units Demolished	Units Gained or Lost from Alterations	Net Change In Number of Units
1988	2,148	2,011	104	n/a	1,907

Total	39,770	31,384	2,981	1,683	30,191

Source: Planning Department Note: Net Change equals Units Completed less Units Demolished plus Units Gained or (Lost) from Alterations.

FIGURE 3.

20-Year Housing Production Trends, 1988-2007

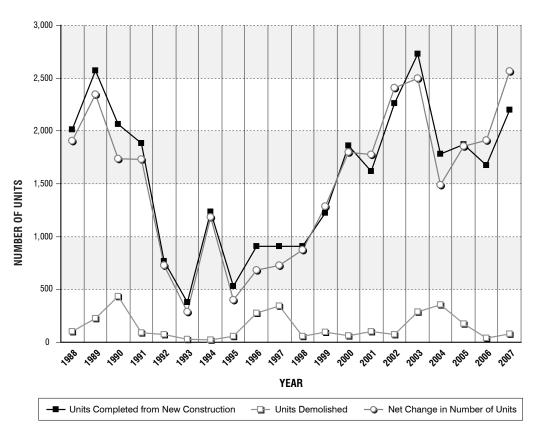

FIGURE 4.

Units Authorized and Completed, 1988-2007

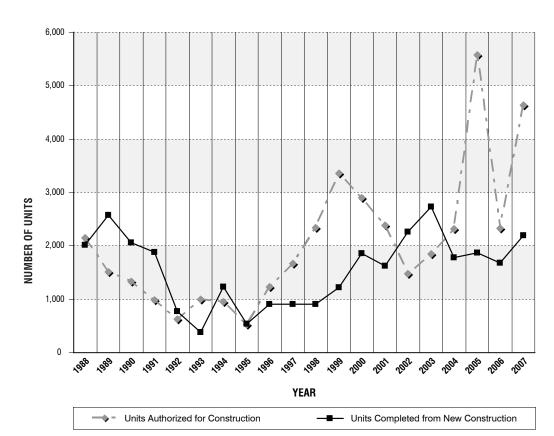

FIGURE 5.
Units Authorized and Gained from New Construction, Alterations, and Demolitions, 2003-2007

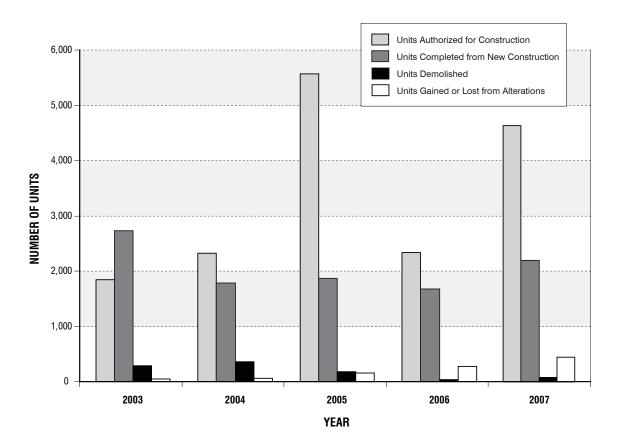

Table 3 shows the number of housing projects filed with the Planning Department over the last five years. It is important to note that Planning may not approve all projects under review or may not approve projects at the unit levels requested. Project sponsors may also change or withdraw the project proposals. Some projects listed in Table 3 as undergoing Planning Department review may have reached their approval stage, been authorized for construction, or may have been completed. Lastly, many of the housing projects under development by the San Francisco Redevelopment Agency (SFRA) do not show up in Table 3, because the SFRA is responsible for the review of those projects.

TABLE 3.

Projects and Units Filed at Planning Department for Review by Year, 2003-2007

Year	Projects Filed	Units Filed
2003	285	4,892
2004	344	6,534
2005	355	6,602
2006	260	7,854
2007	175	10,281
Total	1,420	36,163

Source: Planning Department

Very large projects (over 100 units) filed in 2007 and under Planning Department review in 2007 include: Treasure Island Development Plan (6,000 units); 350 8th Street (416 units); 227 West Point Road (401 net affordable units); 5800 3rd Street (355 units); 900 Folsom Street (300 units); 105 Harrison Street (259 units); 140 New Montgomery Street (175 units); 8 Washington Street (170 units); 168 Eddy Street (170 units); 260 5th Street (151 units); 450 O'Farrell Street (144 units); 181 Fremont Street (140 units); 116 New Montgomery Street (125 units); 114 7th Street (119 units); 429 Beale Street (113 units); 817 Sutter Street (112 units); and 1036 Mission Street (106 units).

Appendix A, List 3 records major projects (10 units or more) that received Planning entitlements in 2007. Appendix A, List 4 contains a list of the major projects (10 or more units) filed at the Planning Department for review during 2007.

Units Authorized for Construction

• In 2007, DBI authorized 3,281 units for construction, 41% higher than 2006. This is 22% higher than the 10-year average (2,679) and 65% higher than the 20-year average (1,989). Since units authorized for construction is one

of the indicators of future housing construction, the number of new units completed is expected to continue to increase over the next few years.

 There were 292 projects authorized in 2007 compared to 231 projects in 2006. In 2007, the average development consisted of 11 units; slightly above the 2006 average project size (10).

Table 4 summarizes the number of projects and units by building type authorized for construction by the Department of Building Inspection (DBI).

Some of the major projects authorized for construction during the reporting year include: 1188 Mission Street (440 units); 435 China Basin Street (319 units); 383 King Street (260 units); 3575 Geary Boulevard (150 units); 1390 Mission Street (136 units); 275 10th Street (135 units); 66 9th Street (107 units); 701 Golden Gate Avenue (100 units); 101 Executive Park Boulevard (98 units); and 125 Mason Street (81 units).

Appendix A, List 5 lists all projects with five or more units authorized for construction in 2007.

TABLE 4.
Units and Projects Authorized for Construction by DBI by Building Type, 2003-2007

Source: Planning Department

Demolitions

- A total of 81 units were demolished in 2007.
 This is almost double the 41 units demolished in 2006 but 57% lower than the five-year demolition average of 187 units.
- Demolition of a 51-unit residential hotel located at 230 Turk Street made up the bulk of demolitions (or 77% of the total) in 2007.
- In 2007, 63% of the demolitions took place in the high-density residential-commercial (RC-4) district (51).

Table 5 shows the units demolished by building type from 2003-2007, and Table 6 shows the demolitions in 2007 by zoning district.

Alterations and Conversions

The majority of building permits issued by DBI are for residential alterations. These alteration permits are for improvements within existing buildings or dwelling units. Some alterations expand the building envelope without increasing the number of units in the building. The *Housing Inventory* is primarily concerned with alterations which result in a net loss or gain in the total number of units in the housing stock.

Dwelling units are gained by additions to existing housing structures, conversions to residential use, and legalization of illegal units. Dwelling units are lost by merging separate units into larger units, by con-version to commercial use, or by the removal of illegal units.

 The net gain of 451 units from alterations in 2007 is comprised of 482 units added and 31

- units eliminated. This is the highest number of net units added from alterations since tracking of alteration data began in 1990.
- Net units gained through alterations increased 61% from the 280 units gained in 2006. The increase is a result of a higher number of units added and a lower number of units eliminated.

Conversion projects completed in 2007 resulted in the addition of almost 392 new units. The conversions of office space or retail space into residential space were primarily in the Downtown or South of Market areas. Office conversions include 83 McAllister Street (60 units); 690 Market (52 units); 310 Townsend (45 units); 1005 Market Street (42 units); 942 Market Street (33 units); and 410 Jessie Street (24 units). Retail or other commercial conversions include 733 Front Street (69 units) and 725 Pine Street (22 units). The 40 affordable units project on 1250 Haight Street was formerly a church.

- Of the 31 units eliminated in 2007, 16 were lost due to mergers and another 10 to the removal of illegal units; five units were lost due to conversions to non-residential uses. This represents a 23% decrease in units lost through alterations.
- The total of 112 units lost in 2007 is 38% higher than that in 2006 when only 81 total units were lost.

Table 7 shows the number of units added or eliminated through alteration permits from 2003 to 2007. Table 8 profiles the type of alterations and demolitions that caused the loss of units during the same period.

New Construction Trends

New construction is the primary engine behind changes to the housing stock. This section examines new construction units over the past five years by looking at the types of buildings and the zoning districts where they occurred.

Types of Buildings

- · Construction of new housing units over the past five years continues to be overwhelmingly (82%) in buildings with 20 or more units.
- Increases were seen in new construction units completed in the "20 + Units" category (59% more than that completed in 2007), the "Single Family" grouping (54%), and the "2 Units" grouping (47%).
- The share of new construction in high-density buildings (20 or more units) was 88% in 2007 — up from five-year average of 82%.
- Single-family and two-unit buildings construction made up a small proportion (6%) of new construction in 2007.

Table 9 shows new construction from 2003 through 2007 by building type. Figure 6 shows new construction by building type for 2007.

New Construction by Zoning District

- In 2007, only 11% of newly constructed units were built in traditional residential (R) districts. Neighborhood Commercial, South of Market Mixed Use, and Mission Bay districts received a relatively even distribution with 23%, 22%, and 22% of the new units respectively.
- Twenty-two percent of all new units built in 2007 are located in the Mission Bay Redevelopment zoning district (MB-RA). The Service Light Industry (SLI) zoning district in South of Market ranked second, with 15% of the total.

Table 10 summarizes new construction by generalized zoning districts. Table 11 lists the number of units constructed in various zoning districts in the City. A complete list of San Francisco's zoning districts is included in Appendix B.

Condominiums

All condominium developments, whether new construction or conversions, are recorded with the Department of Public Works's (DPW) Bureau of Street Use and Mapping (BSM). Annual condominium totals recorded by DPW do not directly correlate with annual units completed and counted as part of the *Housing Inventory* because DPW's records may be for projects not yet completed or from projects completed in a previous year. Large multi-unit developments also file for condominium subdivision when they are first built even though the units may initially be offered for rent. Condominium construction, like all real estate, is subject to market forces and varies from year to year.

New Construction

- 2007 was a record year for new condominium construction. The 3,395 new condominiums recorded were the most ever for one year and represents a 38% increase from 2006.
- Ninety-two percent of the condominiums recorded (3,136) were in buildings with 20 or more units, a 61% increase over 2006 (1,945).
- Overall, the number of new condominiums in the 3-19 unit buildings (199) is a decrease of 57% from the 2006 number.

Table 12 shows construction of new condominiums recorded by DPW over the past 10 years and Table 13 shows new condominium construction by building type over the past five years.

Condominium Conversions

The San Francisco Subdivision Code regulates condominium conversions. Since 1983, conversions of units from rental to condominium have been limited to 200 units per year and to buildings with six or fewer units. More than 200 units may be recorded in a given year because units approved in a previous year may be recorded in a subsequent year. The 200-unit cap on conversions can also be bypassed for two-unit buildings with owners occupying both units.

- A record number of condominium conversions (784) were registered in 2007, the most since conversions have been allowed. This number is 8% higher than the number of conversions in 2006 and 89% higher than the ten year average of 415 units.
- Over 66% of units converted in 2007 occurred in two-unit buildings, representing an increase of 17% from 2006. Conversions of two-unit, owner-occupied buildings are not subject to the annual 200-unit limit on conversions. According to the Bureau of Street Use and Mapping, the upsurge in two-unit and three-unit building conversions can be attributed to an increase in staffing that cleared application backlogs.
- Eighty-six percent of the condominium conversions in 2007 (672) were in buildings with two or three units, compared to 88% in 2006.

Table 14 shows the number of conversions recorded by DPW from 19987-2007. Table 15 shows condominium conversions by building type over the past five years.

Residential Hotels

Residential hotels in San Francisco are regulated by Administrative Code Chapter 41 — the Residential Hotel Conversion and Demolition Ordinance (HCO), enacted in 1981. The Department of Building Inspection (DBI) Housing Inspection Services Division administers the HCO. This ordinance preserves the stock of residential hotels and regulates the conversion and demolition of residential hotel units.

Table 16 reports the number of residential hotel buildings and units for both for-profit and nonprofit residential hotels.

• As of 2007, 19,119 residential hotel rooms exist in San Francisco; 74% are residential rooms in

for-profit residential hotels and 26% are residential in non-profit hotels.

- Residential rooms in non-profit residential hotels have been increasing in each of the past five years: 40% from 2003 to 2007; and 2% from 2006 to 2007.
- In for-profit residential hotels, both residential rooms and tourist rooms in 2007 decreased 1% from 2006.
- The number of for-profit residential hotel buildings continued decreasing, as in the four previous years, from 422 buildings in 2006 to 419 buildings in 2007.

Affordable Housing

Standards and Definitions of Affordability

Affordable housing by definition is housing that is either rented or owned at prices affordable to households with low to moderate incomes. The United States Department of Housing and Urban Development (HUD) determines the thresholds by household size for these incomes for the San Francisco HUD Metro FMR Area (HMFA). The HMFA includes San Francisco, Marin, and San Mateo counties. The standard definitions for housing affordability by income level are as follows:

Extremely low income: Units affordable to households with incomes at or below 30% of the HUD median income for the San Francisco HFMA;

Very low income: Units affordable to households with incomes at or below 50% of the HUD median income for the San Francisco HFMA;

Lower income: Units affordable to households with incomes at or below 60% of the HUD median income for the San Francisco HFMA;

Low income: Units affordable to households with incomes at or below 80% of the HUD median income for the San Francisco HFMA,

Moderate income: Units affordable to households with incomes at or below 120% of the HUD median income for the San Francisco HFMA; and

Market rate: Units at prevailing prices without any affordability requirements. Market rate units gen-erally exceed rental or ownership affordability levels, although some small market rate units may be priced at levels that are affordable to moderate income households.

Housing affordability for units is calculated as follows:

Affordable rental unit: A unit for which rent equals 30% of the income of a household with an income at or below 80% of the HUD median income for the San Francisco HFMA, utilities included;

Affordable ownership unit: A unit for which the mortgage payments, PMI (principal mortgage insurance), property taxes, homeowners dues, and insurance equal 33% of the gross monthly income of a household earning between 80% and 120% of the San Francisco HFMA median income, assuming a 10% down payment and a 30-year 8% fixed rate loan.

Inclusionary Affordable Housing Program units:

These units are rental units for households earning up to 60% of the HUD median income, or ownership units for first-time home buyer households with incomes up to 100% of the HUD median income.

Tables 17 and 18 show the incomes and prices for affordable rental and ownership units based on 2007 HUD income limits. (Note: Separate income guidelines apply to inclusionary affordable units in residential projects that receive their first site or building permit on or after September 9, 2006. See Appendix C for these guidelines.)

New Affordable Housing Construction

• Some 735 affordable units were completed in 2007; representing 33% of the new housing constructed in 2007. Of these, 169 are inclusionary affordable units and 51 are secondary units.

Source: U.S. Department of Housing and Urban Development (HUD)

Note: Incomes are based on the 2007 Area Median Income (AMI) limits for the San Francisco HUD Metro FMR Area (HMFA). Monthly housing expenses are calculated based on 33% of gross monthly income. (FMR = Fair Market Rents). Maximum purchase price incorporate monthly fees and taxes into sales price.

 Very low-income units represent 56% of the new affordable units that were constructed in 2007; affordable homeownership units made up 28%.

Figure 7 shows affordable housing construction compared to market-rate housing construction from 2003 to 2007 by year and as a total.

Table 19 shows the production of affordable housing by levels of affordability and Table 20 shows new affordable housing by type. These numbers do not include affordable units that result from acquiring and rehabilitating residential buildings by nonprofit housing organizations. Those units are covered later in the report.

- The number of new affordable units (735) is 51% more than in 2006 (491).
- Over a third of the new affordable units in 2007 (35%) were units for seniors (258).

 A total of 51 secondary units were added to existing residential buildings in 2007. Secondary, or "granny" units, are typically affordable to households with moderate incomes.

Major affordable housing projects completed in 2007 include: 420 Berry Street (234 units); 201 Berry Street (138 units); 881 Turk Street (100 units); 1250 Haight Street (40 units); and 2900 Arelious Walker Drive (20 units).

All major (10 or more units) new affordable housing projects completed in 2007 are detailed in Appendix A, List 2. Affordable housing projects under construction, or in pre-construction or preliminary planning with either the Mayor's Office of Housing or the San Francisco Redevelopment Agency are presented in Appendix A, List 6.

Notes: Family units include projects with a majority of two or more bedroom units. Individual / SRO includes projects with a majority of studios or one bedroom, residential care facilities, shelters, and transitional housing.

Inclusionary Housing

In 1992, the Planning Commission adopted guidelines for applying the City's Inclusionary Affordable Housing Policy. The policy required housing projects with 10 or more units that seek a conditional use (CU) permit or planned unit development (PUD) to set a minimum of 10% of their units as affordable units. In 2002, the Board of Supervisors expanded these guidelines by requiring all projects with 10 or more units set aside 10% of their units as affordable units to renters earning 60% or less of the area median income (AMI). In condominium developments, the ownership units would be available to people earning up to 100% of the AMI. If a housing project required a conditional use permit, then 12% of the units would need to be made available at the same levels of affordability.

In August 2006, the inclusionary requirements were increased to 15% if units were constructed on-site, and to 20% if constructed off-site and is applicable to projects of five units or more. These increases will only apply to new projects. All projects in the pipeline at the time these changes were adopted will be exempt from these increases, except for projects that have not yet received Planning Department approval and those that will receive a rezoning that increases the amount of housing that can be constructed on their property. Table 21 shows inclusionary units completed from 2003-2007.

- In 2007, 167 inclusionary units were constructed, 12% less than in 2006 but about 8% more than the five-year average of 154 units.
- Some 136 units resulted from the on-site requirement. Two projects completed in 2007 opted for off-site compliance, resulting in 11 inclusionary units completed this year and another 56 units completed in the previous year. The project on 2900 Arelious Walker Drive, a 20-unit, 100% affordable project completed in 2007, is partial off-site compliance of the yet to be completed 300 Spear Street project.

Appendix A, List 1 provides a complete list of projects with 10 or more units constructed in 2007 with details of new construction with inclusionary units for those projects that have them.

Year	Units
2003	104

Source: Planning Department, Mayor's Office of Housing

Affordability of Market Rate Housing

The San Francisco Bay Area remains one of the nation's most expensive housing markets, with housing prices remaining high.

- In 2007, rental prices in San Francisco increased a significant 15%: \$2,750 from \$2,400 for a 2-bedroom apartment. San Francisco rents have now reached the high rental rates seen in 2000.
- In 2007, the median price for a two-bedroom home in San Francisco was about \$664,060 or 2.5% less than 2006 (\$680,970). Overall median sales price in 2007, including all unit sizes and condominiums, was about \$810,000. The 2007 median price for a two-bedroom home in the Bay Area region was set at \$642,910.
- A San Francisco family of three earning 120% of the HUD median income (the household in need of affordable housing with the most income available to spend on purchasing a home
 – \$312,145 from Table 18) would fall short by about \$351,915 of being able to purchase a median-priced two-bedroom home (\$664,060).
- A four-person household earning 80% of the

Sources: Rent-SF.com for Apartment rental prices. California Association of Realtors for home sale prices; the California Association of Realtors Bay Area data do not include Napa and Sonoma Counties. Figures are in current dollars.

median income (the household in need of affordable housing with the most income available to spend on rent) could pay a maximum rent of \$1,730 or 63% of the median rent (\$2,750), about 14% less than in 2006 (76% of median rent).

Table 22 gives rental and sales prices for 1998 through 2007. The high cost of housing prevents families earning less than the median income from being able to purchase or rent a median-priced home in San Francisco.

Affordable Housing Acquisition and Rehabilitation

Acquisition and rehabilitation involves nonprofit housing organizations purchasing existing residential buildings in order to rehabilitate units for low- and very low-income persons. Table 23 shows units that have been rehabilitated through funding by the Mayors Office of Housing (MOH) and the San Francisco Redevelopment Agency (SFRA). Often it is more economical to purchase and rehabilitate existing run-down units than to build new units. While many of these units are residential hotel (single room occupancy or SRO) units, acquisition and rehabilitation also includes homes for residential care providers, apartments for families, and conversions of commercial or industrial buildings for homeless persons and families.

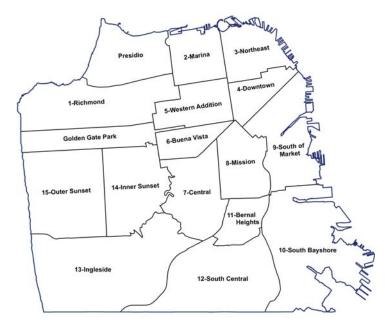

The *Housing Inventory* reports units in such projects as adding to the housing stock only when new units are created as a result of the rehabilitation. For example, if a 50-unit SRO is rehabilitated and at the end, the SRO still has 50 units, then for the purposes of this report, these units would not be counted as adding to the housing stock.

In 2007, 326 existing units were rehabilitated. The major rehabilitation projects for 2007 were the Mission Hotel at 520 South Van Ness (91 units) and 42 units in Treasure Island (TIHDI).

MAP 1. San Francisco Planning Districts

Changes in Housing Stock by Planning District

This section discusses the City's housing stock by Planning District. Map 1 shows San Francisco's 15 Planning Districts.

Table 24 summarizes newly constructed units completed and units demolished in each Planning District. It is important to note that the Net Housing Unit Gain calculation accounts for units lost or gained by alterations, even though these figures are not displayed. The table also ranks each Planning District by its position for each of the ratings categories.

- As in the last six years, the South of Market Planning District had the most new construction in 2007 with 1,317 units built or 60% of the total new construction. Similarly, South of Market had the highest net gain, adding 1,363 units or 53% of net addition citywide.
- The Western Addition Planning District ranked second in new construction (355 units) and in net units gained (366 units).

- The South Bayshore Planning District ranked third in new construction units and in net units gained (218).
- In terms of net units gained, the only other Planning Districts with at least 100 or more units added were Downtown (176) and Northeast (167).
- The Downtown Planning District had the highest number of units demolished, all attributable to a single project where a 51-unit residential hotel at 230 Turk Street was demolished. Other than this project, there were only 30 demolitions citywide and thus the rankings of demolitions by planning area are not very significant.

Figure 8 shows total new housing constructed and demolished by San Francisco Planning Districts in 2007.

TABLE 24. Housing Units Completed and Demolished by Planning District, 2007

No.	District Name	Units Completed	Rank	Units Demolished	Rank	Net Gain Housing Units*	Rank

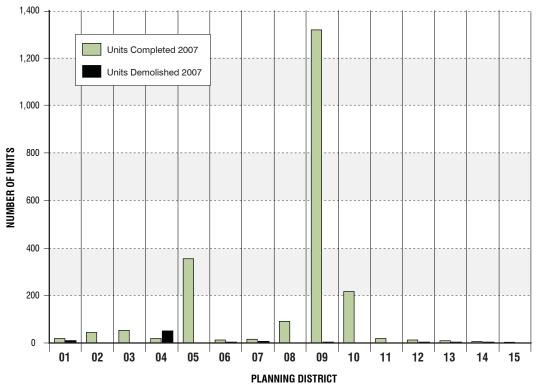

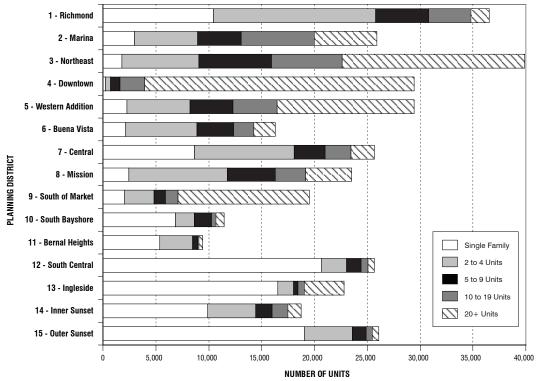

FIGURE 9.

San Francisco Housing Stock by Planning District, 2007

Housing Stock by Planning District

Figure 9 shows the total overall housing stock by building type for the 15 San Francisco Planning Districts. Table 25 contains San Francisco housing stock totals by Planning District and shows the net gain since the 2000 Census.

- The Northeast and Richmond Planning Districts continue to have the highest number of overall units, with each having over 35,000 units. The Northeast District accounts for 11% of the City's housing stock, while the Richmond Planning District accounts for 10%.
- The South Central, Outer Sunset, and Ingleside Planning Districts remain the areas with the highest number of single-family homes in San Francisco. Together these areas account for 51% of all single-family homes.
- The Richmond, Central, and Mission Planning Districts are the areas with the highest numbers of buildings with two to four units, representing 19%, 12%, and 11% of those units respectively.

- In the "5 to 9 Units" category, the Northeast and Richmond Planning Districts have the highest numbers of those units with 17% and 13% respectively.
- The Marina and Northeast Planning Districts continue to have the highest share of buildings with 10 to 19 units. Thirty-seven percent of the City's multi-family buildings with 10 to 19 units are in these districts.
- The Downtown Planning District has the largest stock of the city's high-density housing (25,466). The Northeast Planning District is second with 17,218 units. Eighty-seven percent of all housing in the Downtown Planning District is in buildings with 20 or more units. This district accounts for 32% of all the high-density housing citywide. The Northeast Planning District, next with 43% of its units in buildings with 20 units or more, claims 19% of the City's high-density housing.

Housing Construction in the Bay Area

This section provides a regional context to the City's housing production trends. San Francisco is one of nine counties that make up the Bay Area.

- In 2007, Bay Area counties authorized 18,250 units for construction, 21% lower than the 2006 authorizations (23,475).
- Santa Clara (25%), Contra Costa (19%), San Francisco (18%) and Alameda (17%) counties accounted for almost 80% of the units authorized.
- In San Francisco, 98% of new housing is in multi-family buildings whereas Alameda (59%) and Santa Clara (57%) have more of mix of single and multi-family units. Single-family housing predominates in the other Bay Area counties.

Map 2 shows the nine counties that make up the Greater San Francisco Bay Area. Table 26 shows the to-tal number of units authorized for construction for San Francisco and the rest of the Bay Area for 2007. Figure 10 shows trends in housing construction by building type from 1998 to 2007.

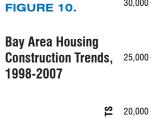

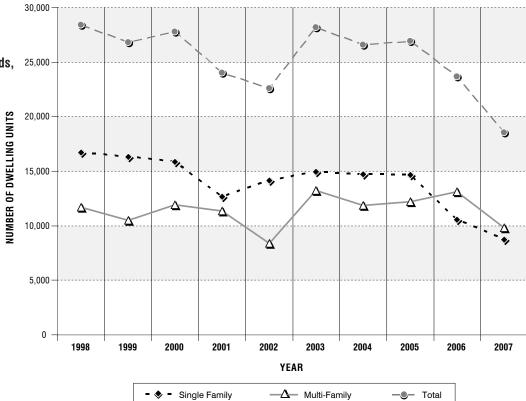

29

TABLE 26. Units Authorized for Construction San Francisco and the Bay Area Counties, 2007

County	Single-Family Units	Multi-Family Units	Total Units	Percent of Total
Alameda	1,338	1,902	3,240	17%

Appendices

Appendix A: Project Lists

This Appendix details major projects in various stages of the planning or construction process: projects under Planning Department review, projects that have been authorized for construction by the Department of Building Inspection, and projects that have been completed. A project's status changes over time. During a reporting period, a project may move from approved to under construction or from under construction to completed. Similarly, a project may change from rental to condominiums, or vice versa, before a project is completed or occupied.

List 1 details major market-rate housing projects with ten or more units that were completed in 2007. This list also includes the number of inclusionary units in the project.

List 2 is comprised of major affordable housing projects with 10 or more units that were completed in 2007.

List 3 provides information for all projects with 10 or more units that were fully entitled by the Planning Department in 2007. These projects typically require either a conditional use permit, environmental review, or some other type of review by the Planning Commission or Zoning Administrator, or the Environmental Review Officer.

List 4 provides information for all projects with 10 or more units that were filed with the Planning Department in 2007. These projects require a conditional use permit, environmental review, or other types of review by the Planning Commission, Zoning Administrator, or the Environmental Review Officer. This list does not include projects submitted for informal Planning project review and for which no applications have been filed.

List 5 contains residential projects with five or more units authorized for construction by DBI in 2007.

List 6 is an accounting of affordable housing projects in the "pipeline" — projects that are under construction, or in pre-construction or preliminary planning with either the Mayor's Office of Housing or the San Francisco Redevelopment Agency.

Appendix B: San Francisco Zoning Districts

Appendix C: Inclusionary Housing Guidelines for Projects Receiving First Site or Building Permits after September 9, 2006

Guidelines for income, rent and sales price limits for below market rate units conforming to San Francisco's inclusionary housing ordinance.

APPENDIX C, TABLE 1. 2007 Inclusionary Housing Rental Guidelines for Projects Receiving First Site or Building Permit after September 9, 2006

Income Levels	Household Size	Average Unit Size	Maximum Annual Income	Monthly Rent
Extremely Low Income	1	Studio	\$16,850	\$388
(30% of HUD Median Income)	2	1 Bedroom	\$19,300	\$445
(30 % of 110D Wedian income)	3	2 Bedroom	\$21,700	\$499
	4	3 Bedroom	\$24,100	\$548
	5	4 Bedroom	\$26,050	\$590
	6	5 Bedroom	\$27,950	\$631
Very Low Income	1	Studio	\$28,100	\$670
(50% of HUD Median Income)	2	1 Bedroom	\$32,150	\$766
(30 % of 110D Wedian income)	3	2 Bedroom	\$36,150	\$860
	4	3 Bedroom	\$40,150	\$949
	5	4 Bedroom	\$43,400	\$1,024
	6	5 Bedroom	\$46,600	\$1,097
Lower Income	1	Studio	\$33,700	\$810
(60% of HUD Median Income)	2	1 Bedroom	\$38,550	\$926
(00 % of 110D Wedian income)	3	2 Bedroom	\$43,400	\$1,041
	4	3 Bedroom	\$48,200	\$1,150
	5	4 Bedroom	\$52,050	\$1,240
	6	5 Bedroom	\$55,900	\$1,330
Low Income	1	Studio	\$44,950	\$1,091
(80% of HUD Median Income)	2	1 Bedroom	\$51,400	\$1,247
(60 % OF HOD WEGIAN INCOME)	3	2 Bedroom	\$57,850	\$1,402
	4	3 Bedroom	\$64,250	\$1,551
	5	4 Bedroom	\$69,400	\$1,674
	6	5 Bedroom	\$74,500	\$1,745

APPENDIX C, TABLE 2. 2007 Inclusionary Housing Homeownership Guidelines for Projects Receiving First Site or Building Permit after September 9, 2006

Income Levels	Household Size	Average Unit Size	Maximum Annual Income	Monthly Housing Expense
Low Income	1	Studio	\$44,950	\$1,236
(80% of HUD Median	2	1 Bedroom	\$51,400	\$1,414
Income)	3	2 Bedroom	\$57,850	\$1,591
	4	3 Bedroom	\$64,250	\$1,767
	5	4 Bedroom	\$69,400	\$1,909
Median Income	1	Studio	\$56,200	\$1,546
(100% of HUD Median	2	1 Bedroom	\$64,250	\$1,767
Income)	3	2 Bedroom	\$72,300	\$1,988
	4	3 Bedroom	\$80,300	\$2,208
	5	4 Bedroom	\$86,750	\$2,386
Moderate Income	1	Studio	\$67,450	\$1,855
(120% of HUD Median	2	1 Bedroom	\$77,100	\$2,120
Income)	3	2 Bedroom	\$86,750	\$2,386
	4	3 Bedroom	\$96,400	\$2,651
	5	4 Bedroom	\$104,100	\$2,863

APPENDIX D. Glossary

Affordable Housing Unit: A housing unit -- owned or rented -- at a price affordable to low- and middle-income households. An affordable rental unit is one for which rent equals 30% of the in-come of a household with an income at or below 80% of the HUD median income for the San Francisco PMSA, utilities included. An affordable ownership unit is one for which the mortgage payments, PMI, property taxes, homeowners dues, and insur-ance equal 33% of the gross monthly income of a household earning between 80% and 120% of the San Francisco PMSA median income, assuming a 10% down pay-ment and a 30-year, 8% fixed-rate loan.

Alterations: Improvements and enhancements to an existing building. At DBI, building permit applications for alterations use Forms 3 and 8. If you are not demolishing an existing building (Form 6) or newly constructing a new building (Forms 1 and 2), you are "altering" the building.

Certificate of Final Completion (CFC): A document issued by DBI that attests that a building is safe and sound for human occupancy.

Conditional Use Permit: A permit that is only granted with the consent of the Planning Commission, and not as of right.

Condominium: A building or complex in which units of property, such as apartments, are owned by individuals and common parts of the property, such as the grounds and building structure, are owned jointly by all of the unit owners.

Current dollars: The dollar amount for a given period or year not adjusted for inflation. In the case of income, it is the income amount in the year in which a person or household receives it. For example, the income someone received in 1989 unadjusted for inflation is in current dollars.

General Plan: Collection of Objectives, Policies, and Guidelines to direct guide the orderly and prudent use of land.

HMFA: HUD Metro FMR (Fair Market Rent) Area an urbanized county or set of counties with strong social and economic ties to neighboring communities. PMSAs are identi-fied within areas of one million-plus populations.

Housing Unit: A dwelling unit that can be a single family home, a unit in a multi-unit building or complex, or a unit in a residential hotel.

Inclusionary Housing Units: Housing units made affordable to lower- and moderate-income households as a result of legislation or policy requiring market rate developers to include or set aside a percentage (usually 10 to 20 percent) of the total housing development to be sold or rented at below market rates (BMR). In San Francisco, this is usually 15%, and it applies to most newly constructed housing developments containing 5 or more dwelling units.

Median Income: The median divides the household income distribution into two equal parts: one-half of the households falling below the median household income and one-half above the median.

Pipeline: All pending development projects -- filed, approved or under construction. Projects are considered to be "in the pipeline" from the day they are submitted for review with the Planning Department, the Redevelopment Agency (SFRA), or the Department of Building Inspections (DBI), until the day the project is issued a Certificate of Final Completion by DBI.

Planning Code: A local law prescribing how and for what purpose each parcel of land in a community may be used.

Primary Metropolitan Statistical Area (PMSA): A PMSA is an urbanized county or set of counties with strong social and economic ties to neighboring communities. PMSAs are identified within areas of one million-plus populations.

Single Room Occupancy (SRO) Units: Residential hotel rooms, typically occupied by one person, lacking bathroom and/or kitchen facilities.

Temporary Certificate of Occupancy (TCO): Like a CFC, a TCO allows occupancy of a building pending final inspection.
